

Trial By Trial Data Sheet

Special Learning

Directions: Fill in Name/Date, Target, Instruction and Response. Circle teaching level: Alone – target only or RR/All – target in random rotation with other mastered items. Take data on each trial. If in RR/All, write target of trial on first line. Circle data (C=Correct, I=Incorrect, NR=No Response, P=Prompted). On second line, write any additional comments and prompt level if prompt was used. Write number of total correct trials and number of total trials. Divide total correct by total trials to get percentage correct.
